THESE ANIMALS ARE FUNNY

Hi there, my friend!

After winter, nature wakes up and comes alive! Trees also wake up from their winter sleep and get ready to bloom, making the world colourful and beautiful. Have you ever thought about how awesome trees are and how much they do for us? They're like the beating heart of our lives, even though we don't notice it. In this special edition, we'll talk about the amazing trees and learn how precious they are for the survival of all living things. Get ready for exciting tree facts and more fun topics in this edition! Let's explore together!

WHAT'S UP?

Exciting Times at the Park!

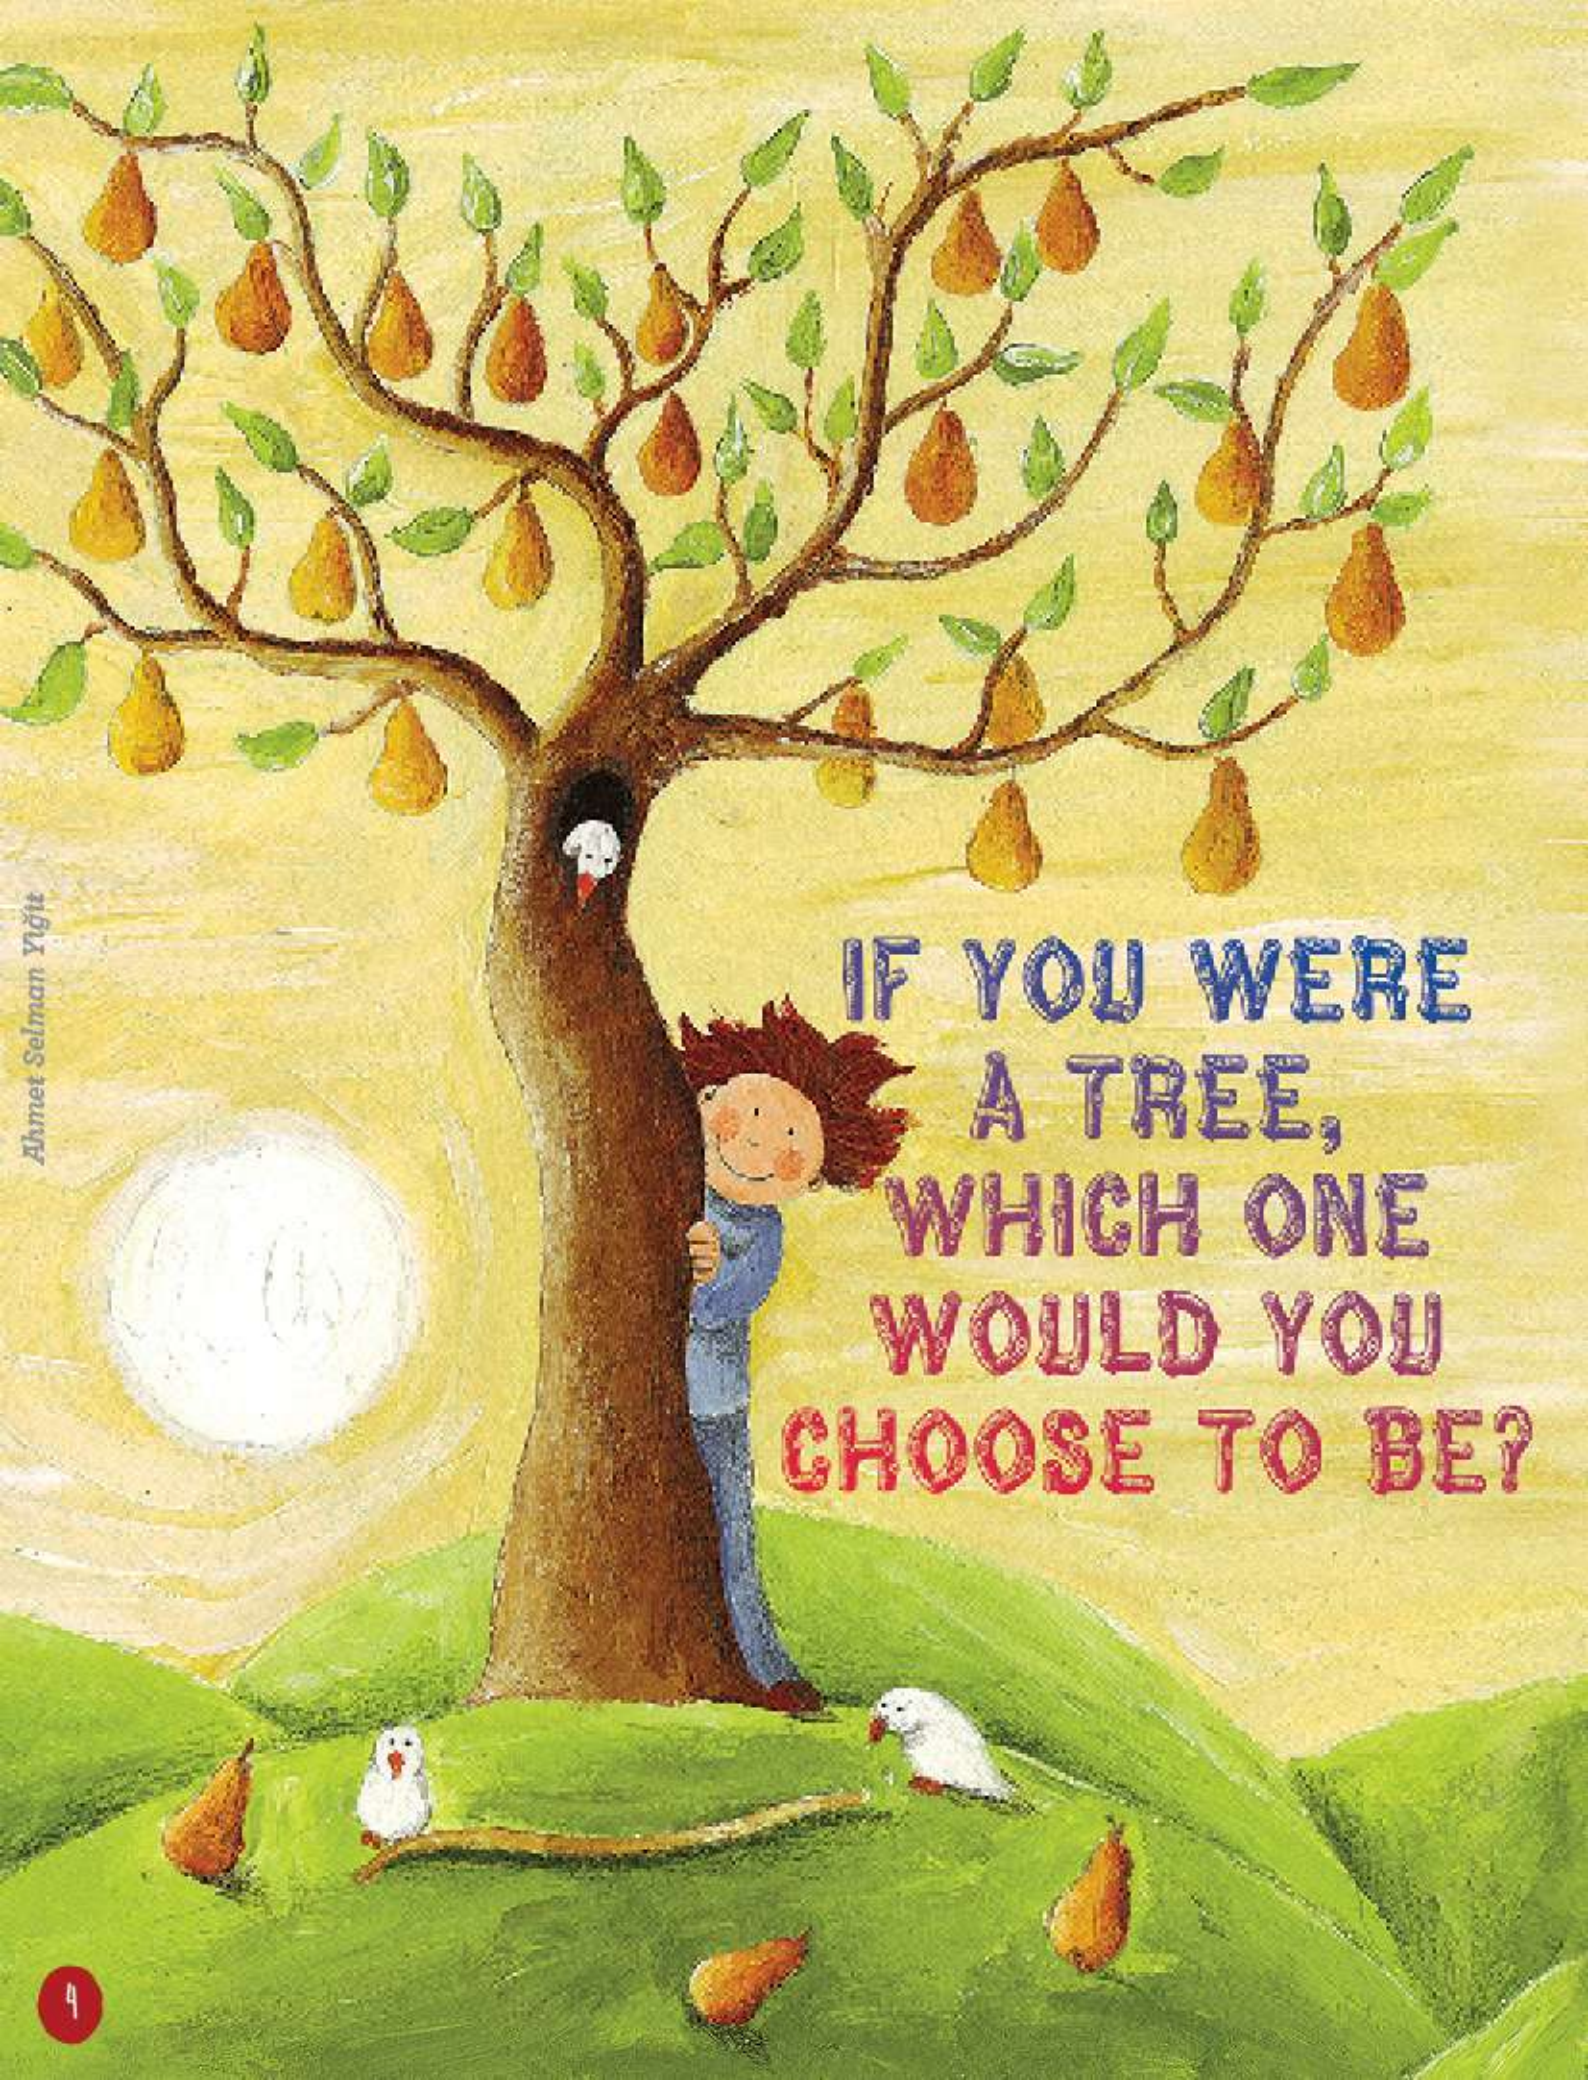

Guess what happened at this park? A bear cub and its mummy had a blast! They were so happy to find an empty park next to a school in North Carolina, USA. You won't believe what they did next - they started sliding down the slide together! First, the mummy bear went down the slide and patiently waited at the bottom for her cub. At first, the little cub was a bit scared, but then it decided to join in on the fun too!

Bright Lights Threaten Insects

Did you know that too much light can make life difficult for insects? When there's too much light at night it's called light pollution. Scientists discovered that light pollution is not good for insects. In England, they found out that moths and caterpillars are getting affected by light pollution. Their numbers have gone down by half! It's not just that. Some insects are also behaving differently because of all the lights. Insect populations around many cities could decline rapidly unless a solution is found for all this light pollution.

IF YOU WERE
A TREE,
WHICH ONE
WOULD YOU
CHOOSE TO BE?

Every year, with the arrival of spring, all the trees go through a tremendous transformation. Their branches shoot out tiny, young leaves, making it look like a beautiful green blanket that covers them all. It's a wondrous sight that signals the start of new life and revival. Even the majestic thousand-year-old sequoias and the wise old pines standing for centuries are adorned with fresh and vibrant leaves. This incredible miracle happens every year, all thanks to the humble beginning of a tiny seed.

From a Tiny Seed to a Huge Tree

First, a tiny seed gently falls to the ground. The soil lovingly embraces it, protecting against the harsh elements of cold, heat, and pests. Then, with the arrival of warm spring days, a miraculous transformation unfolds. It's as if nature receives a secret command, and everything bursts open, vibrant and chiming with life. The soil awakens the insects and plants within it and draws them back to the surface. Insects emerge

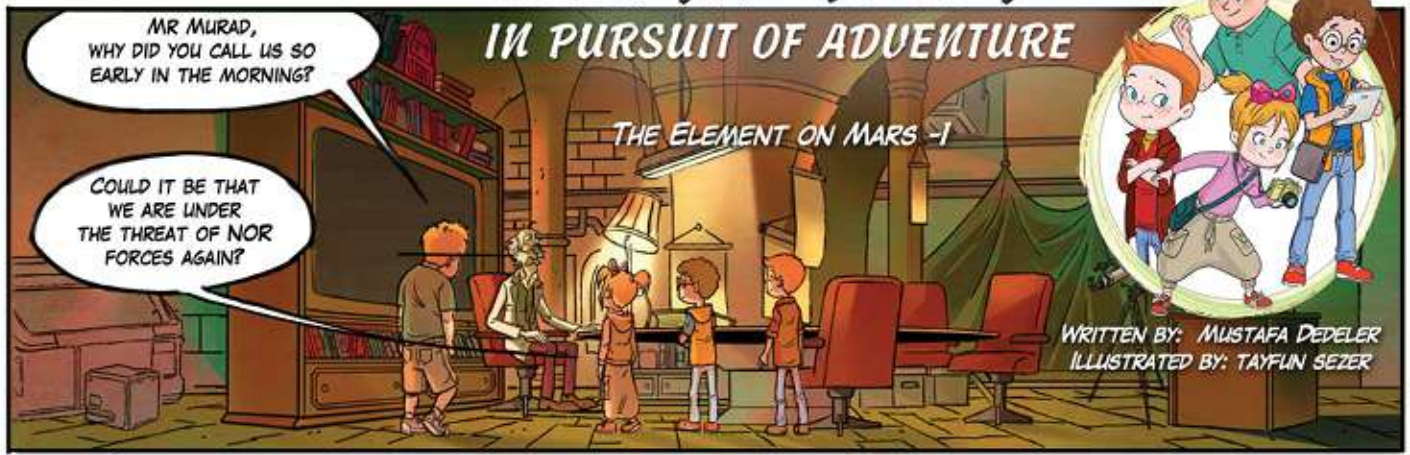

to the surface and start crawling about again, while plants open their new green buds. Snowdrops and a tapestry of grasses unite to paint the earth's surface in a vibrant shade of green. And in this very moment, the dormant seed stirs beneath the soil, sensing that the time for its grand journey is nearing. It breaks free from its protective shell and takes its first step by steadily reaching upward. As the sprout emerges, it delicately extends its roots down, seeking nourishment from the fertile soil. And so it is, the extraordinary story of a tree's life begins.

METIN AND HIS TEAM IN PURSUIT OF ADVENTURE

WRITTEN BY: MUSTAFA DEDELER
ILLUSTRATED BY: TAYFUN SEZER

MR MURAD,
WHY DID YOU CALL US SO
EARLY IN THE MORNING?

COULD IT BE THAT
WE ARE UNDER
THE THREAT OF NOR
FORCES AGAIN?

THE ELEMENT ON MARS -I

I THOUGHT
WE WERE
INVITED TO
BREAKFAST.

OOO, MERT! I'M
SURPRISED YOU
MENTIONED
BREAKFAST.
YOU HAVEN'T
EATEN FOR DAYS!

YES, MERT,
WHAT HAPPENED
TO YOU? YOUR EYES
HAVE GONE RED,
AND YOUR
SHOULDERS
HAVE SLUMPED.

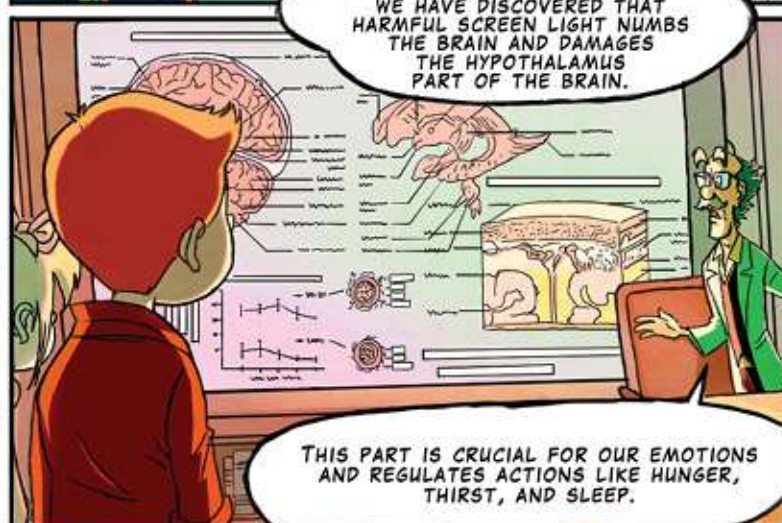

HE BECAME SICK AND AGGRESSIVE
WHEN HE STARTED USING
THE VIRTUAL REALITY GLASSES.
HE STOPPED EATING AND SLEEPING
EVEN THE DOCTORS COULDN'T
FIGURE OUT WHY...

HMM...I SEE. I THINK
IT'S TIME TO SHARE
WITH YOU SOME IMPORTANT
INFORMATION. LET ME TELL YOU
WHAT'S HAPPENING.

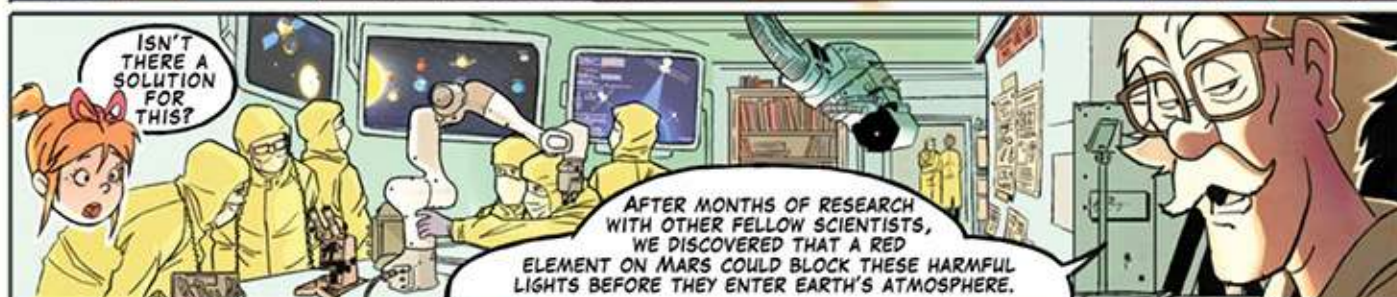

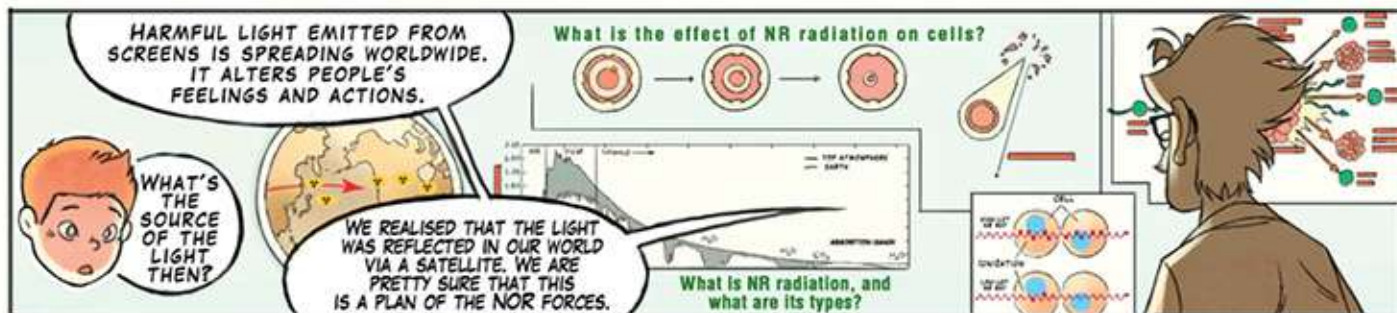

IN THE LAST FEW MONTHS,
WE HAVE DISCOVERED THAT
HARMFUL SCREEN LIGHT NUMBS
THE BRAIN AND DAMAGES
THE HYPOTHALAMUS
PART OF THE BRAIN.

THIS PART IS CRUCIAL FOR OUR EMOTIONS
AND REGULATES ACTIONS LIKE HUNGER,
THIRST, AND SLEEP.

SO, WHEN I GET
CARRIED AWAY WITH A
VIDEO GAME, THAT'S
THE REASON I DON'T
FEEL HUNGRY
OR THIRSTY.

These Animals are Funny

İsmail Bilgiç

Cute Penguins

Don't worry! These penguins are not as scary as they may seem. They just bend their necks backwards to scratch their backs.

Hey Dad, look directly into the camera with an intense gaze, so they can see who the 'toughest owl' around here is.

Come on, Dad. You are indeed the toughest.

Intense Stare

The owl chicks are probably waiting for the food brought by their father. However, the chilling gaze their father directed at the camera is quite frightening. This scene must have been an irresistible opportunity for the cameraman to capture.

Backed-up Meal

Squirrels store food to eat during the winter. This squirrel probably planned to take the leftovers to its nest after satisfying its hunger. However, its mouth seemed a bit too full.

What?
Not yet lunch?

Mum, wake up! The photographers have arrived. Wait, let me at least give a greeting so they can shoot a nice picture.

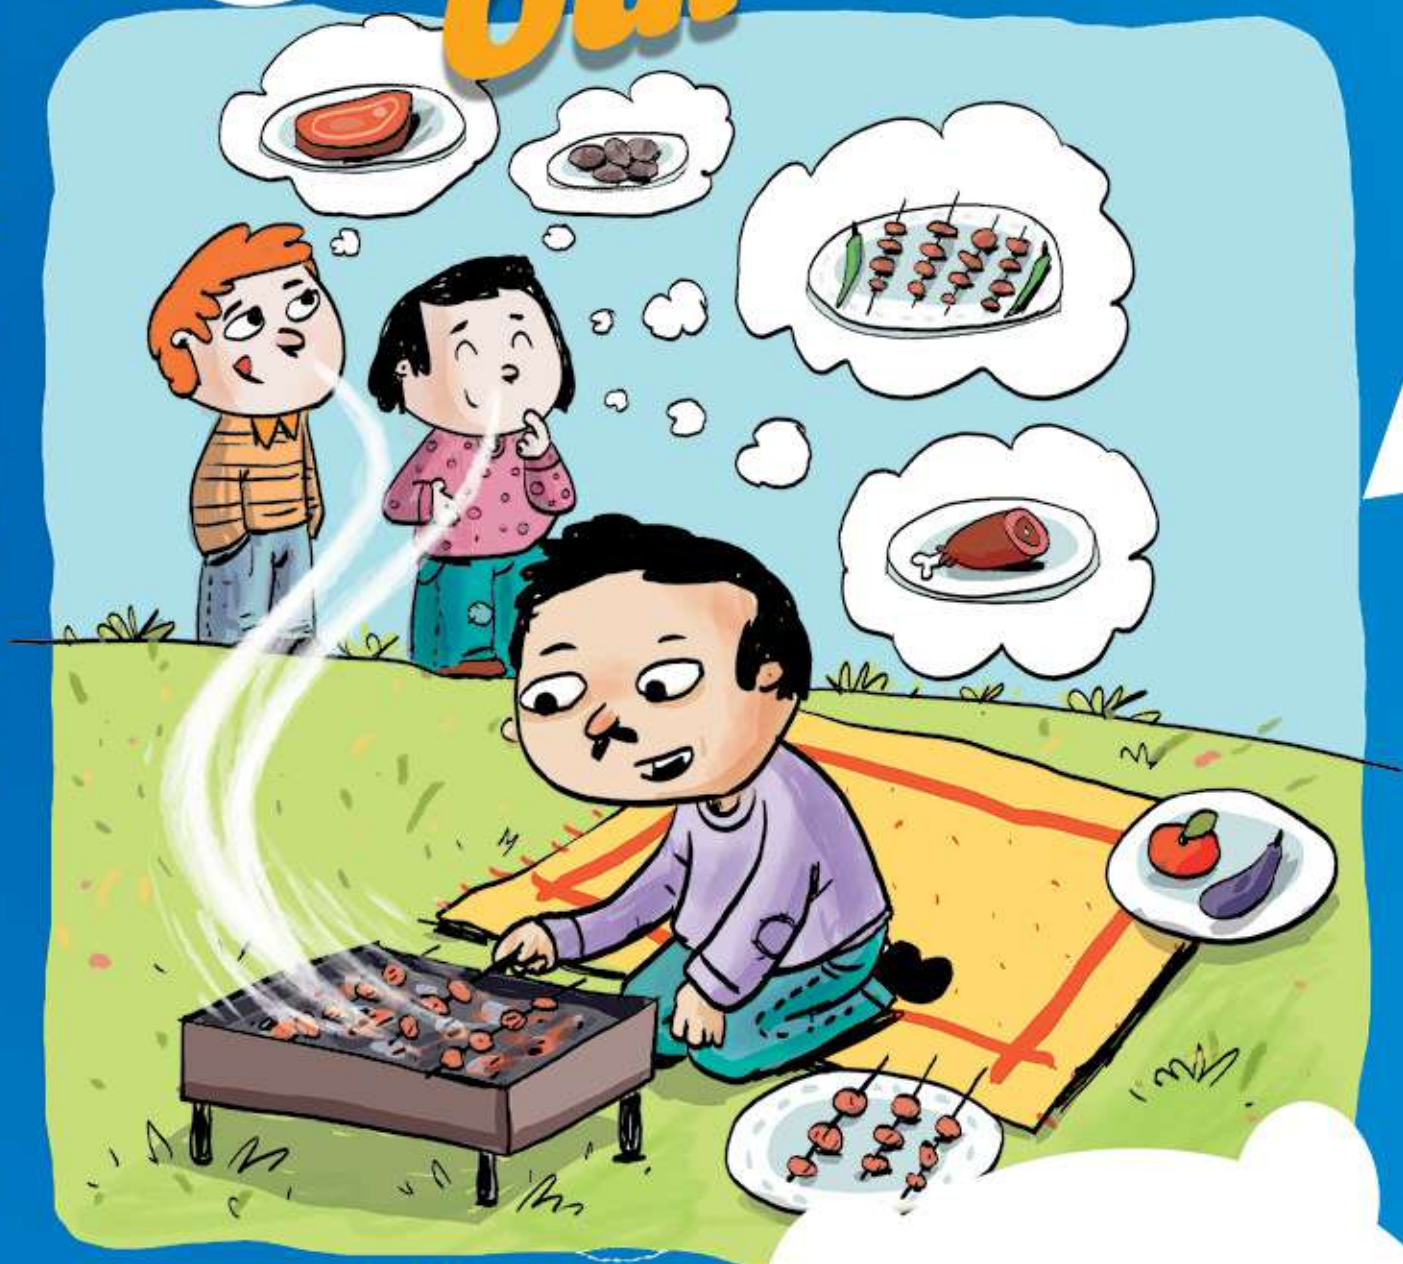

Hi There!

This little polar bear looks happy while its mother is sleeping. Look at that. It even didn't forget to greet those who took its picture.

The Best Air Filter in the World: Our Nose

Written by: Yusuf Enes Özmen Illustrated by: Yusuf Örs

We can sense the delightful aroma of a delicious meal prepared by our mother, the freshly baked scent of bread just out of the oven, or an unpleasant aroma like the smell of spoiled milk with our noses.

The nose is the organ of smell and respiration protruding on our face with two openings located between our forehead and mouth. It can be challenging to see one's own nose without... without looking in the mirror. People have noses of various sizes and shapes, whether large or small, rounded or pointed, and it is one of the most noticeable parts of our faces.

A COUNTRY OF CULTURAL DIVERSITY

CHINA

Hello, my friend! How have you been since we last met? How about going to China, the largest country in Asia, on this trip? This country is located in the eastern part of the Asian continent and on the western coast of the Pacific Ocean. It has the world's largest population. It is so crowded that people's living spaces vary from bamboo houses to skyscrapers, from tents to caves. China is said to have the highest number of wild animal species in the world.

Moreover, the crane and giant panda are among the country's symbolic animals. China, being an ancient civilisation, is said to be the starting point of the Silk Road. Thanks to the Silk Road, trade goods could reach as far as the Mediterranean, Anatolia, and Europe. Throughout history, China has hosted people of various races and cultures, so it has a large number of historical and religious structures, cultural heritage sites, nature reserves, and museums. Let's start our journey towards China, the land of cultural diversity!

1 THINK AND DISCOVER!

Nuri Aydağ

1

Can you spot the squirrels hidden in the tree?

Y

Z

?

50 km/s

2

Car "Y" departed from city "A" and 2 hours later, Car "Z" left from city "B". They met on the way after Car "Z" travelled for 3 hours. The speed of car "Z" was 50km/h.

According to this information:

What is the speed of car "Y" in km/h?

What is the distance between City "A" and City "B"?

A) Y=30 km/h A-B=300 km

C) Y=25 km/h A-B=250 km

B) Y=40 km/h A-B= 400 km

D) Y= 20 km/h A-B= 200 km

3

This mathematical operation is incorrect. Change the position of one of the sticks to make the sum correct.

$$5 + 4 = 4$$

4

Ahmad went to meet his friend Salim at the bus station. He started waiting for Salim at four. When Salim reached the station at 5 o'clock and asked his friend if he had been waiting for a long time, Ahmad replied, "I've been waiting for you for two hours!" How is this possible?

5

We want to make a pentagonal prism. How many sticks do we need to make the prism?

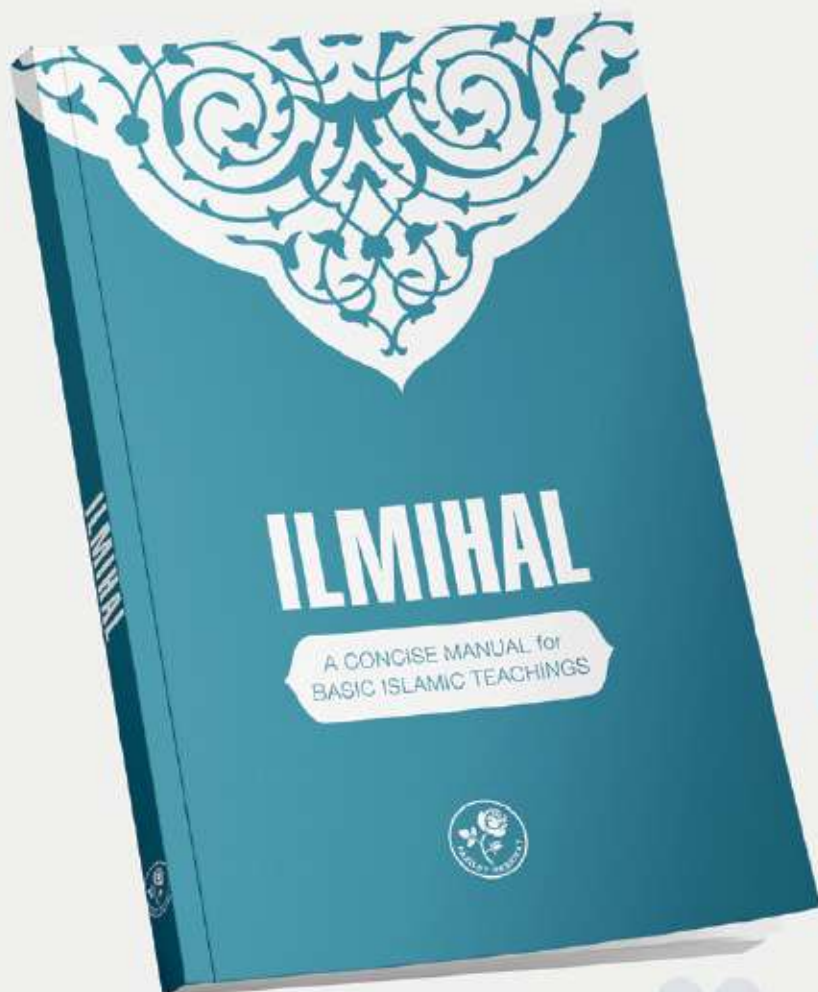

Solve the mathematical operation by starting from the beginning.

Solve the mathematical operation by starting from the beginning.
